# PARENTING TIME WORKSHEET

**You may use this sheet if there is a parenting time order or written agreement, or if the parents have split custody (each parent has custody of one or more children).** This sheet will help you convert parenting time overnights into percentages. It can also help determine overall parenting time percentage when parenting time is different for different children.

**If there is a parenting time order or written agreement,** enter the amount of parenting time (based on a two-year average) each party spends with each child. A party can be a parent, a caretaker, or the state, if the child is in state care. Compute each party's percentage of parenting time for each child by dividing the party's overnights by 365. Round the result to two decimal places (e.g., "54.36%"). If you already know each party's percentage of overnights for the child, you may simply enter the percentages.

**For split custody calculations with no parenting time order or written agreement,** use 100% for the party who has physical custody of the child. Enter 0% in the other party's column.

**Do not include children attending school or adult children on this worksheet.** The overall parenting time credit determined from this worksheet will be applied to all children, including any adult children or children attending school.
